

# Power Transmission

A HENKELS & MCCOY Group Company

Henkels & McCoy has been building and maintaining aerial and underground transmission lines for utility and generation customers for decades. Our coordinated planning expertise, extensive resources, and depth of experience combined with our national footprint enables us to work in any terrain or challenging weather conditions, anywhere in the country.

We have experience in transmission work through 765 kV and are skilled in all aspects of construction, from access through wire pulling. We perform to your expectations on schedule, quality, and safety.

We understand the criticality of system outage windows, and work to ensure they are not compromised. We have experience with the major vendors, engineering consultants, suppliers, and all transmission equipment. Whether your need be construction, or full Engineering, Procurement, and Construction (EPC), Henkels & McCoy provides the critical services necessary to fulfill your transmission project's requirements successfully, quickly, and thoroughly.

*PERFORMANCE* has built our business...<sup>®</sup>

## POWER TRANSMISSION SERVICES

### Aerial

- Installations through 765 kV
- ROW clearing
- Access road construction
- Environmental compliance
- Foundations:
  - Drilled pier, grillage, screw piles, or driven caisson, micropile foundations
- Structures: Wood, steel, lattice, concrete
- Single or bundle conductor installation
- OPGW and ADSS
- Reconductoring
- Helicopter supported work
- EPZ safe working practices
- Live line work

### Underground

- Installations through 230 kV
- Manhole and conduit
- Duct and vault installation
- Trenching
- XLPE and oil static cable
- Splicing and testing
- Directional drilling
- Environmental compliance
